Flexibility and Robustness for Veterinary Radiology

CDR 100 vet is a radiographic table designed by IBIS to provide a practical and versatile solution for veterinary radiology applications.

Its robust construction and compact design allow easy installation within the X-ray room, while the possibility of combining it with different generators and acquisition systems makes it possible to configure the workstation according to the specific needs of the veterinary facility.

Freedom of Positioning

The four-way floating table allows the patient tabletop to be moved easily when positioning the animal. Mechanical brakes secure the tabletop in the desired position, providing the operator with control and practicality when preparing different radiographic projections.

Dedicated tie-down points also allow patient restraint or traction systems to be securely attached, facilitating correct positioning during the examination.

Designed for the Veterinary Environment

The movable tabletop features an antibacterial, radiolucent and scratch-resistant surface, designed to ensure hygiene, durability and practicality in everyday use.

The structure combines robust construction with a compact footprint, making CDR 100 vet suitable for both new installations and integration into existing X-ray rooms.

A Flexible Platform for Different Configurations

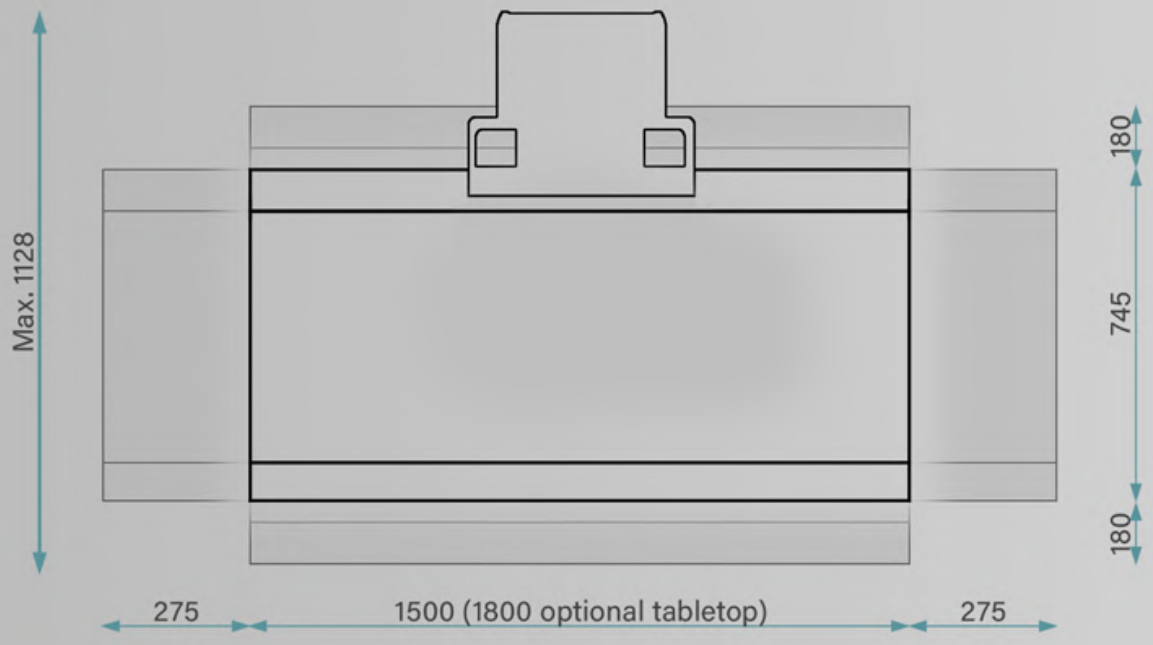

CDR 100 vet can be supplied with or without a stainless steel cassette holder, depending on the acquisition system in use.
